

Rustic Accentation

The light fixtures are two cylindrical wall mounted lamps on one switch. They can be placed at different levels above the floor adding balance with the varied sizes. The old, semi-finished appearance of the wood will fit into the scheme of the modern, industrial styled apartment. The lids have a linear design to contrast the circular shape of the lamps. The lines additionally bring some unity to the entire piece. The light bulb is a frosted Eco-Friendly bulb that can be recycled. The piece contains all items that can continue to be reused.

The body of the light fixture is composed of two separate cylindrical containers. The containers are made from thin pieces of wood and used to be cheese boxes, used for shipping and receiving wheels of cheese. The boxes were found among various antiques in the upper, unfinished basement of an, originally, rural house.

During the construction of the fixture, the boxes were only drilled a few times so as to keep the shape and durability. The lids, however, were altered more drastically. The slits were sawed into let light escape and the plastic inserts to glue into place for the purpose of even light diffusion and haze. The fixture, being hung on the wall, required only one hook per box and the lids of the boxes can simply be placed on the frame and there should be no concern of them falling off.

When the fixture is no longer wanted the untreated wood can be burned to nourish the soil and help the environment and ecosystem. It can also be reused for another purpose, for example, additional furniture creation or exposed storage. The plastic can be melted and reused for another purpose. It is a thick and strong acetate, so it is not limited to only indoor reuse. The decorative chain around the wire can always be reused because the metal used, if kept properly, will not disintegrate; the chain links can also be fixed if ever broken. The light bulb is a frosted Eco-Friendly bulb that can be recycled. All the materials used have sustainable qualities and can be reused and repurposed, if not already doing so.

Any wall is sufficient for this light fixture. Being a decorative fixture, there is flexibility in the placement of the lamps. The designer would prefer it go in either the foyer or the dining area. But the living room or the kitchen island wall would be sufficient.
