

Malaysian Bungalow

Amanda Villasenor

Project Overview

This three-story, bungalow styled house is located in PetalingJaya,

Selangor, Malaysia. It is home to a family, consisting of a couple with their three children, all under the age of 13. The family's maid also resides in house.

The gross build up is approximately 6,500 sq ft.

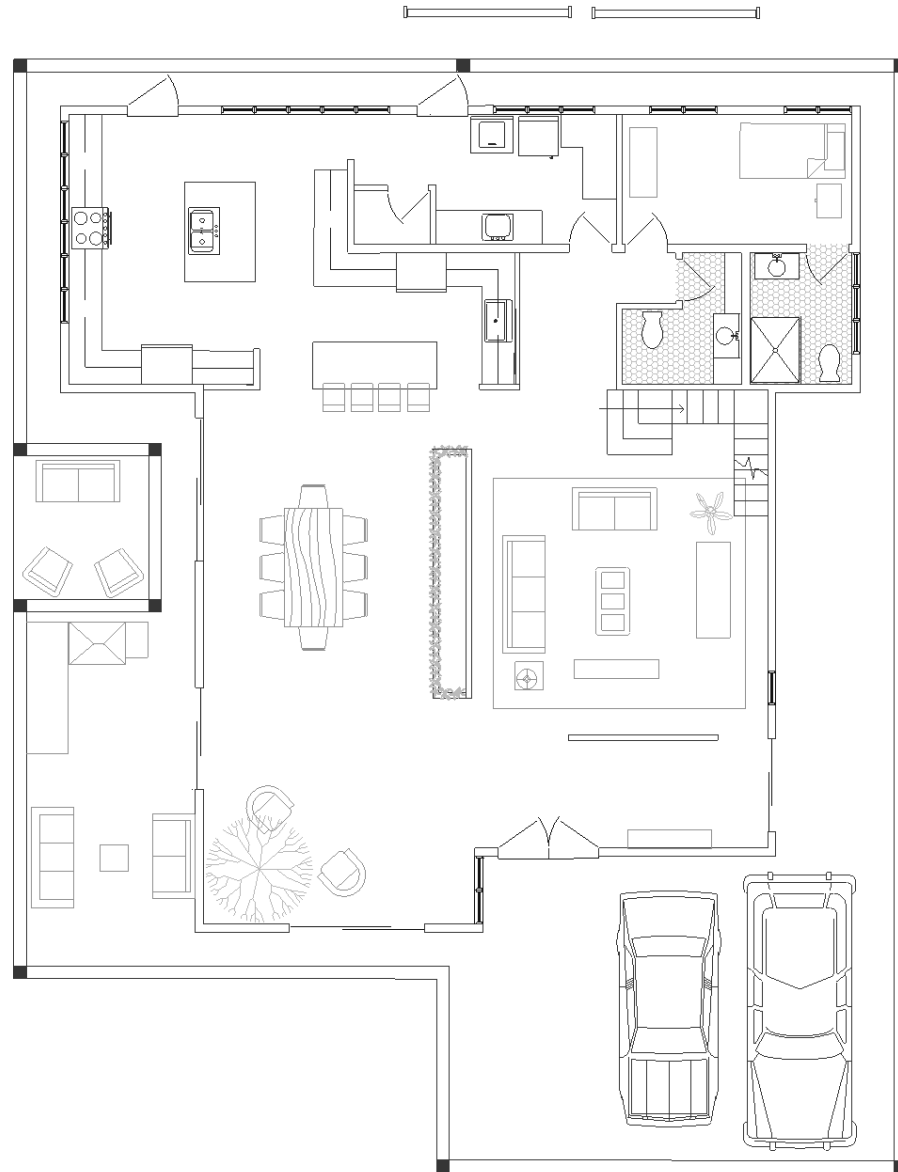

It includes many windows and doors, but does not meet the clients' satisfaction.

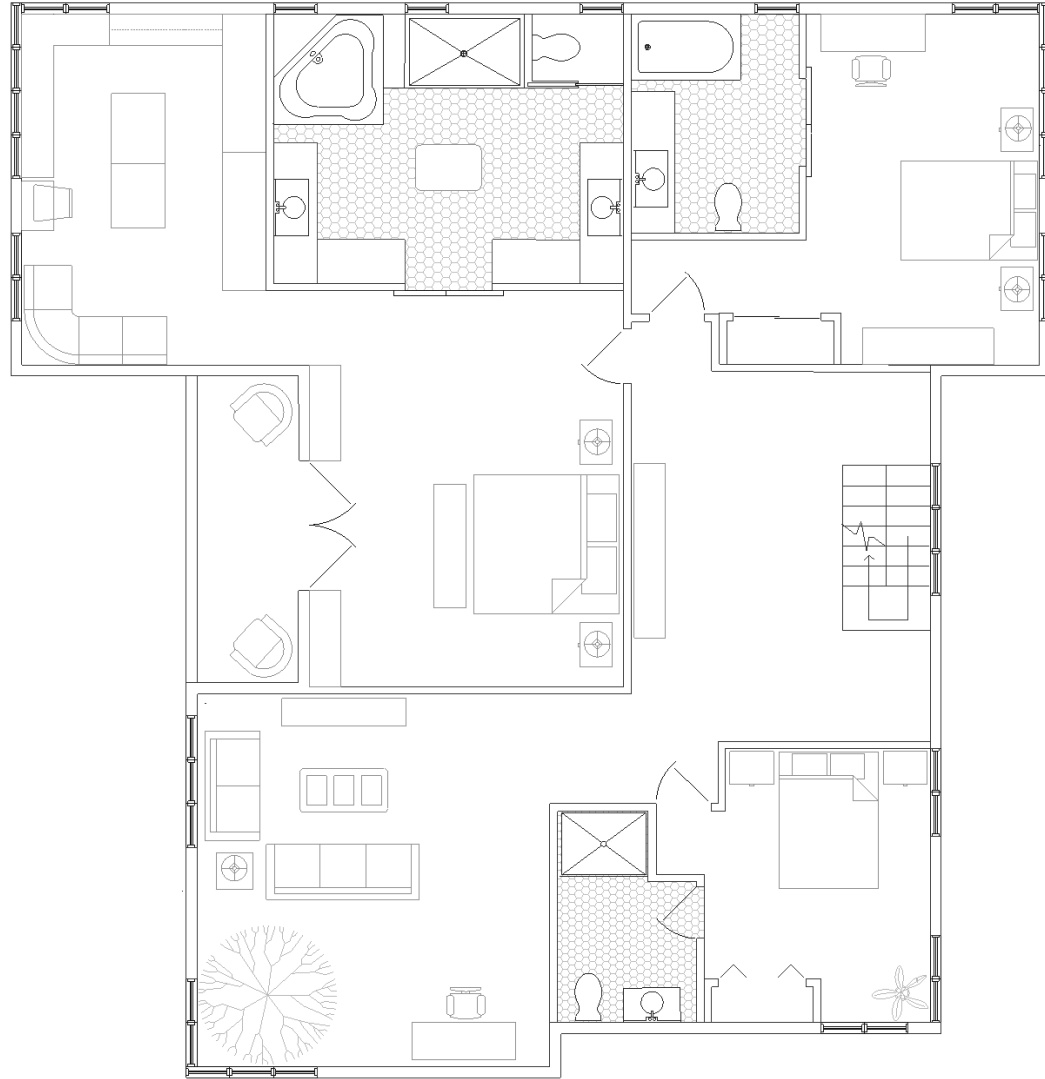

Concept Statement

This home, while big, is not functional enough for the current residents. The kitchens are too small, and other areas of the house lack aesthetic. The remodel of the home is influenced by a modern, Balinese design style. In addition, natural elements will be added in, as well as an indoor courtyard, hopes of tying the outdoor with the indoor. A water feature will be added to add to the design aspect, but will also serve as a divider between the living and dining. The kitchens will be made larger and more open. The upstairs will also consist of a larger, more satisfying master bedroom. Overall, this house will be open concept, tie in elements of nature, and consist of calm, earth tones, all while meeting the needs of the client
